

**PALAEOENVIRONMENTAL AND CLIMATIC CHANGES
IN AUSTRALIA DURING THE EARLY CRETACEOUS**

**PALAEOMILIEU EN -KLIMAATSVERANDERINGEN
IN AUSTRALIË GEDURENDE HET VROEG KRIJT**

(Met een samenvatting in het Nederlands)

PROEFSCHRIFT

Ter verkrijging van de graad van doctor aan de Universiteit Utrecht,
op gezag van de Rector Magnificus, Prof. Dr. W.H. Gispen,
ingevolge het besluit van het College voor Promoties
in het openbaar te verdedigen op
donderdag 30 september 2004 des morgens om 10:30 uur

door

Antje Margriet Oosting

geboren op 31 maart 1969 te Melbourne, Australië

PROMOTOR: Prof. Dr. A.F. Lotter
Faculteit Biologie, Universiteit Utrecht

CO-PROMOTOR: Dr. H. Leereveld
Faculteit Biologie, Universiteit Utrecht

Additional supervisors:

Dr. G.R. Dickens
Department of Earth Sciences, Rice University, VS

Prof. Dr. R.A. Henderson
School of Earth Sciences, James Cook University, Australië

Dr. H. Brinkhuis
Faculteit Biologie, Universiteit Utrecht

The research reported in this thesis was carried out at the Laboratory of Palaeobotany and Palynology, Utrecht University (The Netherlands) and at the School of Earth Sciences, James Cook University (Australia). The research at James Cook University was supported by a departmental 'Earth Science Scholarship.' Additional financial support was provided by Geoscience Australia and the Laboratory of Palaeobotany and Palynology, LPP Foundation.

STATEMENT OF ACCESS

I, the undersigned author of this work, understand that James Cook University will make this thesis available for use within the University Library and, via the Australian Digital Theses network, for use elsewhere.

I understand that, as an unpublished work, a thesis has significant protection under the Copyright Act and;

I do not wish to place any further restriction on access to this work

CONTENTS

Acknowledgements		9
Chapter 1	Introduction and summary	11
	Introductie en samenvatting	17
Chapter 2	Direct correlation of Barremian-Aptian (mid-Cretaceous dinoflagellate cyst assemblages from the Tethyan and Austral realms <i>with H. Leereveld, G.R. Dickens, R.A. Henderson and H. Brinkhuis, submitted to Cretaceous Research</i>	23
Chapter 3	Environmental reconstructions for the Aptian (mid-Cretaceous of the Carpentaria Basin (NE Australia) by means of geochemical and palynological records from BMR Mossman-1 <i>with H. Leereveld, R.A. Henderson, G.R. Dickens and H. Brinkhuis, will be submitted to Palaeogeography, Palaeoclimatology, Palaeoecology</i>	55
Chapter 4	Early Aptian and Albian (mid-Cretaceous) geochemical and palynological records from the Eromanga Basin (Australia): indication of the Toolebuc Formation being an expression of OAE 1c <i>with R.A. Henderson, H. Leereveld, G.R. Dickens and H. Brinkhuis will be submitted to Cretaceous Research</i>	89
Chapter 5	The expression of global palaeoenvironmental and climatic changes in Australia during the mid-Cretaceous <i>with R.A. Henderson, H. Leereveld, G.R. Dickens and H. Brinkhuis will be submitted to Palaeogeography, Palaeoclimatology, Palaeoecology</i>	149

Table 16	Organic carbon isotope data for DSDSP site 263, Australia

Acknowledgements

And then finally, I can thumb through the pages. Realizing that I would never have been able to if it had not been for the motivation and encouragement I received from my co-promotor Han Leereveld. Han, you made my study a wonderful and enjoyable experience. I will especially remember my stays on Terschelling for the doses of ‘scientific realism’ from you, alternating with the ‘things that makes one wonder’ sessions with Ankie. To the two of you, the warmest and most grateful thank you.

But no study without a subject or support. For which I am indebted to Jerry Dickens, Bob Henderson, Henk Brinkhuis and my promotor Andy Lotter.

Bob Henderson is thanked for sharing his geochemical data from the Eromanga Basin, which was funded through an Australian Research Council (ARC) large grant.

Sincere thanks for all kinds of administrative and technical support are due to Rachel Mahon and Melissa Thomson at James Cook University and Jan van Tongeren, Zwier Smeenk, Natasja Welters and Marjolein Mullen at Utrecht University.

I am especially grateful to Clinton Foster for his help and managing additional funding from the Geoscience Australia, and to John Backhouse, Robin Helby, and Eric Monteil for their help in solving my taxonomical problems.

I like to thank Poppe de Boer, Helmut Weissert and Dick Kroon for reviewing this thesis.

I am indebted to Tim Bell and the School of Earth Sciences at James Cook University for taking me on as an Earth Science Scholar.

The support of the Laboratory of Palaeobotany and Palynology, the LPP Foundation, and Geoscience Australia are gratefully acknowledged.

To the ‘nonprofessionals’ for the joyous introduction on Aussie life, and to those to try and figure out the ‘How/What/Why?’ about it, a big thank you to Kirsten and Sigrid, Stephen and Sue, Sally, Patricia Mark, Mike Page, Melissa, Mary, Julie Hunt, Geordie, Damien, Andrew Heap, and everybody else from the School of Earth Sciences at James Cook University. For the refreshing How/What/Why about The Netherlands once a year, a happy thanks to Cindy and Ivo, Erica, Hanneke, Karin, Lenny, and everyone else at the Laboratory of Palaeobotany and Palynology.

A very special thanks goes to Julie Richmond, Nienke de Haan, and the whole Oppers (including Horsseleben and the three KO-tjes!) family.

And on whatever continent I stayed there were always the kindest, nicest and most hospitable people, so numerous that it is impossible to thank them all personally here. But to all of you, my sincerest thanks.

Being able to complete my PhD-study would have been impossible if it hadn’t been for my mother, Tjaco, Barbara, Esther, Robin-Jan, Ezra and Maarten. Never failing and always there; “dikk’n kuss’n!”
