STATEMENT OF THE CONTRIBUTION OF OTHERS

Support for the completion of this thesis was obtained via the following sources.

FEES:

Funded by a James Cook University Research Training Scheme place.

Any other assistance:

Australian Guild of Music Education Inc: Access to Electronic Examination Reports.

DECLARATION ON ETHICS

The research presented and reported in this thesis was conducted within the guidelines for research ethics outlined in the *National Statement on Ethics in Research Involving Human* (1999), the *Joint NHMRC/AVCC Statement and Guidelines on Research Practice* (1997), the *James Cook University Policy on Experimentation Ethics, Standard Practices and Guidelines* (2001) and the *James Cook University Statement and Guidelines on Research Practice* (2001). The proposed research methodology received clearance from the James Cook University Experimentation Ethics Review Committee (approval number H1541).

ACKNOWLEDGEMENTS

The concept and title of the research was initially conceived within an aura of doubt and even some negativity but, after the mental confusion and indecision at the thought of commencing a major project in my seventy seventh year dissipated (fifty years after concluding the Bachelor of Music Degree at Melbourne University!), it soon became a deeply absorbing undertaking that was skillfully nurtured within a positive environment of forward vision that was constantly encouraged by Professor Diana Davis, Head of the College of Music, Visual Arts and Theatre (COMVAT) at James Cook University, Queensland, Australia. This exceptional academic with her keen mind and equally keen perceptive powers, enabled me to develop and fulfill the maturing vision of the work ahead. For all of this I am indebted, and I sincerely and unequivocally thank Professor Davis for her unstinting guidance so readily given, which together with her persistence, and tremendous support, has now very much become a part of me and will forever remain so.

Grateful acknowledgement is unhesitatingly offered to:

- Professor Helene Marsh, Dean of Postgraduate Studies, James Cook University for her compassionate understanding of my status as a veteran of the Second World War.
- The Office staff at COMVAT (James Cook University) for their readiness to co-operate and respond to my requests, when printing and other tasks of communication became essential.
- Ryan Daniel, staff member and fellow student at COMVAT, James

Cook University who was always ready to provide assistance to my requests, even though he, at the same time, was preparing his own doctoral thesis.

- My long suffering wife, Violet Jean who spent many a silent hour by herself during the long and yet surprisingly short six years, passing innumerable cups of coffee down to me over the staircase railings whilst I was writing this thesis in the girls' old rumpus room with the computer keyboard for company and at odd times on the pianoforte keyboard to keep the technique under control. To say that I am most grateful for her understanding and constant support in what developed into a massive research undertaking that made many demands upon our personal life and recreation time, is a major understatement.
- My entire family for their constant support. In particular I thank my three girls, all of whom have University Degrees ranging from Bachelor to Masters, for their untiring vocal stimulation. They constantly wanted to know how things were going. "How much longer Dad?"
- The Office staff of the Australian Guild of Music Education Inc. (Melbourne) in making available from their very extensive archives, many thousands of I.T files of practical Public Music Examinations.
- The James Cook University Ethics Committee for granting me ethical access to these archives which was vital for the ultimate success of the research.
- Dr. E Knoop, Director of the Australian Guild of Music and Speech Education Inc. for his strong personal support in taking over my many academic duties with the Australian Guild for six years, thus enabling me to allocate time to meet the maturing demands of the study.

- Professor Don Close (James Cook University) for advice with quantitative methods.
- Professor Warren Bebbington, Dean of the Melbourne University Conservatorium for his support and interest, who, at the time was the Chairman of the Australian Music Examinations Board.
- Ms Elizabeth Mitchell, Staff member of the College of the Arts (Victoria), an AMEB examiner, who was most helpful and supportive.
- Ms Christinne Patton of Wollongong, (NSW), the Trinity College of Music (London) representative who provided a great deal of valuable data.
- Mrs Joyce Trickett, Director of the Australian Music Teachers Register (Victoria), afforded me very much appreciated publicity on her Web Site
- The Victorian Music Teachers Association (VMTA) who published my request in their regular Magazine (Music and the Teacher) for teachers to respond to a Questionnaire concerning the Private Music Teacher and the Public Examination System.

For all of this I am grateful, as without the data collated from these sources, the successful completion of this research would not have been possible.

Ivan Holmes. Date. 2006

ABSTRACT

The research focuses on quality issues within the private music teaching industry and the public music examination system (PMES).

It is clear that there is a schism between the formalized structures and accountabilities of music in the school system and the lack of such structures and accountabilities with the private studio music teaching industry. The Thesis traces the literature documenting the rise of the private music teacher and the accountability rationale implicit in the development of the public music examination system. The dual aims of the research focus on the need to profile the private music teaching industry in Australia and to probe the extent to which the public music examination system might, in practice, afford a window of accountability on to this industry.

The literature foregrounding this study derives from three areas: the historical development of the private music teaching industry; the concomitant need for certification - and the resultant development of the public music examination system; finally the issue of performance assessment across the relevant disciplines is explored to provide research direction for music.

A limited profile of the private music teacher emerged from the first phase of the study. While the respondent sample was smaller than was originally envisaged, comparison with other studies (e.g., Gibbs 1999) suggested that the findings from the current study were consistent. The second phase focussed specifically on the public music examination system and its tangible outcomes

in the form of the examination report.

Five examiners were male and three female. Reports were analyzed in terms of the relevant examination sections with a primary focus on the Technical and Performance lists sections. In each section reports were segmented into idea units as the basic unit for analysis. Categories were derived from the data and each idea unit was categorized accordingly. Examiners' use of categories was analyzed in each section and comparisons made between examiners. Considerable examiner variability was identified.

A discussion of gender differences in accessing categories generates hypotheses for further research. Discussion of marks awarded by examiners leads to hypotheses about the implications of exposure to one examiner rather than another.

While this is but a small scale study and possibly the first in the music genre, its implications for further research are far-reaching. Implications for the discipline are also explored.
