THE GROSS STATE PRODUCT  
AND AN  
ECONOMETRIC MODEL  
OF THE  
STATE OF QUEENSLAND

Thesis submitted by  
Peter John CROSSMAN, B.Ec.  
in June 1981

for the Degree of Doctor of Philosophy in  
the Department of Economics at the  
James Cook University of North Queensland

## STATEMENT OF ACCESS

I, the undersigned author of this work, understand that James Cook University will make this thesis available for use within the University Library and, via Australian Research Online, for use elsewhere.

I understand that, as an unpublished work, a thesis has significant protection under the Copyright Act and;

I do not wish to place any further restriction on access to this work

**Or**

I wish this work to be embargoed until

## ABSTRACT

With regard to the economic features of the Australian federation, it is becoming evident that two matters will stimulate increasing investigation and analysis over the next decade. The first of these matters is the study of the economic performance of the individual states, given the move towards greater autonomy of the states in many functional areas and greater reliance on their own sources of revenue. The second of these matters is the study of the interactions between the economies of the nation and the individual states, particularly the impact of federal government decisions on the states. This thesis is a contribution to the first of these developments, and seeks to make a contribution to the regionally disaggregated view of macro-econometrics, in the context of Australia.

This thesis has the objective of determining answers to two questions. Firstly, using existing data sources, both published and unpublished, is it possible to construct a reasonably accurate and disaggregated set of estimates of gross state product for Queensland? Secondly, is it then possible to construct a macro-econometric type regional econometric model of the State of Queensland, using these gross product estimates?

The first question has been answered in this thesis by developing a set of quarterly estimates of the gross state product at factor cost of Queensland, for forty quarters from September 1969 to June 1979, disaggregated by ASIC industry division and by principal component, using payroll tax tabulations as the basic data source. The method of estimation is an improvement over other recent gross state product estimation, both in Australia and overseas.

Since much state economic data are available only on an annual basis, a method of interpolating quarterly values from annual values of economic series was chosen and improved. The second question was then answered by specifying a quarterly regional econometric model for Queensland based, as much as possible, on the general specification of Klein (1969). This model was then estimated by ordinary least squares and two stage least squares with principal components, and a number of exploratory dynamic simulations were performed.

## LIST OF TABLES

Table		Page
1.1	Queensland in relation to Australia	6
2.1	Selected economic indicators, by state	19
2.2	Comparison of rates of real economic growth in Queensland and Australia, 1970-71 to 1978-79	21
2.3	A tabular survey of selected regional econometric models	31
2.4	Cross-classification of the selected model regions by population and area	38
2.5	Outline of the structure of the Czamanski (1968) regional econometric model	71
2.6	Instrument and target variables in the Czamanski (1968) regional econometric model	72
3.1	Queensland and Australian Household Income to Gross Product ratios	88
3.2	Alternative approaches to the estimation of Gross State Product	91
3.3	Selected GSP work in the USA	94
3.4	GSP work in the UK	103
3.5	Previous Australian GSP work	108
3.6	Coghlan's economic accounts of New South Wales, 1894	109
3.7	Arndt and Butlin's economic accounts of New South Wales, 1891	112
3.8	Clark's estimates of national income for Queensland, 1937-38	113
3.9	Kerr's estimates of state income at factor cost by productive sector for Western Australia, 1955-56	115
3.10	Wong's estimate of GSP at factor cost for Tasmania, 1969-70	117
3.11	Hudson's estimates of GSP at market prices by industry for Tasmania, 1969-70	118

Table		Page
3.12	Comparison of Tasmanian GSP estimates, 1962-63 to 1965-66	121
3.13	Donovan's estimates of GSP for Queensland, 1953-54 to 1965-66	122
3.14	Gross domestic product at factor cost by industry and principal components, Australia, 1977-78	125
3.15	Abbreviations used in GSP estimation section	128
3.16	Industries used in this study	133
3.17	Estimates of gross product, by industry and principal component for Queensland and Australia, 1977-78	134
3.18	Gross value of farm production, Queensland, 1977-78	137
3.19	Sugar mill seasons in the 1977 sugar "year"	138
3.20	The sugar commodity quarterly allocators for 1977-78	139
3.21	Industry allocators for WS for non-PAD commonwealth employees	144
3.22	Estimation of CLI to ASIC reconciliation proportions	151
3.23	Wages and salaries measured by payroll tax tabulations, by industry and quarter, Queensland, 1977-78	153
3.24	Exemption limits for payroll tax, Queensland	154
3.25	Small business allocators	155
3.26	Detailed WSSQ estimation, September quarter 1977	156
3.27	Quarterly allocation of gross operating surplus of ownership of dwellings, Queensland, 1977-78	159
3.28	Imputed bank service charge estimation, Queensland, 1977-78	159
3.29	National and IEC-adjusted GOS to WSS ratios for mining, manufacturing and electricity, 1969-70 to 1978-79	162
3.30	National ratios for other industries, 1969-70 to 1978-79	163

Table		Page
3.31	GSP at factor cost by industry, Queensland, 1969 III to 1979 II	164
3.32	Wages, salaries and supplements by industry, Queensland, 1969 III to 1979 II	165
3.33	Gross operating surplus by industry, Queensland, 1969 III to 1979 II	166
3.34	Proportions of direct versus indirect estimation of GSP, Queensland, 1977-78	169
3.35	Queensland GSP as a proportion of Australian GDP, by industry, 1969-70 to 1978-79	170
3.36	Queensland's principal components of gross product as a proportion of Australia's, 1969 III to 1979 II	172
3.37	Per capita principal components of gross product, Queensland and Australia, 1969-70 to 1978-79	173
3.38	Percentage industry contribution to gross product, Queensland, 1969-70 to 1978-79	175
3.39	Rankings of relative size of Queensland industries, 1969-70 to 1978-79	176
3.40	Industry relative specialization quotients for gross product Queensland, 1969-70 to 1978-79	177
3.41	Annual percentage growth in GSP at current prices by industry, Queensland, 1970-71 to 1978-79	179
3.42	Implicit price deflators for Queensland and Australia and GSP at average 1974-75 prices, 1969-70 to 1978-79	181
3.43	Annual percentage growth in GSP and GDP at average 1974-75 prices, 1970-71 to 1978-79	182
3.44	Comparison with naive estimates, GSP, Queensland, 1969-70 to 1978-79	184
3.45	Queensland's share in Australia	185
3.46	Comparison with IEC results	186
3.47	Comparison with Queensland Transactions Matrix results, 1973-74	188
4.1	Comparison of interpolated data statistics	200
4.2	US quarterly GNP and its estimates	202

## DECLARATION

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institute of tertiary education. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

P.J. Crossman

15 June 1981

## ACKNOWLEDGMENTS

I would like to thank my supervisors at James Cook University, Professor C.P. Harris and Professor K.P. Stark, for their patient assistance and invaluable advice during the writing of this thesis. Also, Professor Harris is thanked for the pleasant and scholarly climate he has engendered as Head of the Department of Economics - a climate from which I have greatly benefited.

I would also like to record my appreciation of the professional and cheerful advice and excellent computing facilities provided by Mr Ian Hunter, Manager of the James Cook University Computer Centre, and his staff, and also Mr Geoff Duce, and his staff of Administration Data Processing, who provided invaluable assistance in data preparation.

The Australian Bureau of Statistics has been most cooperative. I particularly wish to thank Mr O. May, Deputy Commonwealth Statistician and Queensland State Statistician, and his staff of the Queensland Office, for their constructive comments on this work at various stages and their assistance in the provision of data.

My thanks also go to Professor W. Hogan and Dr C. Clark who were kind enough to read and comment on working papers discussing gross state product estimation, and Dr B. Grewal who was kind enough to comment on several drafts of this thesis. Finally, I thank Mrs Joy Walterson, who typed this thesis. Without her assistance and drive, this thesis would not have been completed on time.
