Baykonur Formation (Continued)
characteristics, 305
chemostatigraphy, 305
conglomerates, 305
dolomite, 305
geochronological constraints, 305
glaciogenic deposits and associated strata, 303–306
outcrops, 304
palaeolatitude and palaeogeography, 305
sandstones, 305
sedimentary environments, 305–306
shales, 305
stratigraphy, 303
structural framework, 303
type sections, 304

Bebedouro Formation
geological map, 304
ice-contact glaciomarine system, 305
schematic representation of glacial lithofacies, 306
Una Group, Bahia (Brazil), 305–307
Beck Spring Dolomite, 190
Beck Spring Formation, 464
Bedgroup 19, 586
Bedgroup 20, 586–587
Bethania Member, 199
bidirectional climate change, 20
Bixiobasia Formation
glaciogenic diamictites, 374
stratigraphy, 373
Big Cottonwood Formation, 428
Big Creek roof pendant map, 440
Billy Springs Formation, 697
Billy Springs glaciation, South Australia, 693–698
Adelaide Rift Complex locality maps, 694
boundary relations, 696
density stratigraphy, 696
glaciogenic deposits and associated strata, 696–697
glaciogenic deposits and associated strata, 694–696
Mid Ediacaran palaeogeography, 697
palaeolatitude and palaeogeography, 696
stratigraphy, 693–694
structural framework, 693
Bimbo sandstones, 190
Bimbo volcanic rock, 439
biogenic dolomite, 76
biological theories, 26
biostatigraphy of Australia, 113–130
Bitter Springs anomaly, 55, 57
Blackrock Canyon Limestone stratigraphy, 429
Black Stump Arkose, 686
Blackwelder, Eliot, 21
Blair Formation of Lesser Himalaya, India, 347–353
age plot for detrital zircons, 353
boundary relations, 352
chemostatigraphy, 352–353
diamictites, 350
dolomite, 350–352
geochronological constraints, 353
glaciogenic deposits of fold-and-thrust belt, 348
glaciogenic deposits and associated strata, 348–352
interpretation, 349–350, 352
lithostratigraphic and biostratigraphic subdivision, 349
lithostratigraphic sections and chemostatigraphy, 351
locations of measured sections, 350
massive and laminated diamictite lithofacies, 348–349
Neoproterozoic–Cambrian succession, 349
palaeolatitude and palaeogeography, 353
sandstones, siltstones and shales, 350
significance of isotopic analyses, 352–353
stratigraphy, 348
structural framework, 347–348

Blaubeker Formation, 213, 215
Glaciogenic deposits and associated strata, 213
Bluedrift Member, 227–228
Bloupoot Formation, 233–237
boundary relations, 235
chemostatigraphy, 235–236
correlation of diamictic, 237
diamictite-hosting, 235
glaciogenic deposits and associated strata, 234–235, 235
palaeolatitude and palaeogeography, 236
structural framework and tectonic evolution, 233–234
Bocaina Formation, 493
Bogenfel's Formation, 220
Bokson Group
age, 285–288
boundary relations, 286
characteristic, 288
chemostatigraphy, 286
diamictites, 287
glaciogenic deposits, 287
geochronological constraints, 287
geographic distribution, 287
palaeolatitude and palaeogeography, 287
stratigraphy, 285–286
structural framework, 285
Bell Bollana Tillite, 707
Boll' sho y Patom Formation, Lena River, central Siberia, 309–315
associated strata, 310–312
boundary relations, 313
carbonate congo-brecceias, 312
chemostatigraphy, 313
composite sections, 311
conglomerates, 190
correlation between Vendian and Ediacaran Systems, 313
diamictites, 311–312
stratified, 312
glaciogenic constraints, 313–315
geographic distribution, 310
lithostratigraphic section, 310
composites, 310
boundary relations, 310
carbonate congo-brecceias, 312
chemostatigraphy, 313
composite sections, 311
conglomerates, 190
correlation between Vendian and Ediacaran Systems, 313
diamictites, 311–312
stratified, 312
glaciogenic constraints, 313–315
geographic distribution, 310
lithostratigraphic section, 310
composites, 310
boundary relations, 310
carbonate congo-brecceias, 312
chemostatigraphy, 313

boundary relations, 220
characteristics, 220
chemostatigraphy, 220
generalized lithostratigraphy of Marmora Terrace, 219
glaciostratigraphic constraints, 220
INDEX

725

glaciogenic deposits and associated strata, 219–220
Bloemfontein Formation, 220
Chameis Gate Member, Dernburg Formation, 219
palaeolatitude and palaeogeography, 220
stratigraphy, 219
structural framework and tectonic evolution, 217–219
tectonic subdivision of Marmora Terrane in western Gaturp Belt, 218
Chameis Group, 217–221, 218
Chameis Subterrane, 218
Chang'an Formation, 359
Chapada Acauí Formation, 528
Châmis Subterrane, 218
chemical sediments, 67–74
85 oxides in molecular ratios, 89
Oman Masirah Bay Formation, Neoproterozoic glacial deposits and climate implications for study of Neoproterozoic climate, 297–298 boundary relations, 299–300
chemostratigraphy, 300–301
glaciogenic deposits and associated strata, 298–299
palaeolatitude and palaeogeography, 301
stratigraphy, 297–298
Upper Precambrian diamictites of Central Siberia, 297–302
chemical index of alteration (CIA), 81–90
A–CN–K diagram, 83
evidence of glaciomarine deposits, 86–89
implications for study of Neoproterozoic climate change, 89
Neoproterozoic glacial deposits and climate transitions, 81–90
Oman Musirah Bay Formation, 89
oxides in molecular ratios, 85
provenance and reconstruction of original compositions, 84–86
relationship between two weathering proxies, 82
sampled formations and compositional groupings, 83
values of Neoproterozoic Port Askaig Formation, 88
weathering and weathering indices, 81–83
weathering trends, 86
whole-rock compositions and weathering indices, 87, 88
Weathering Index of Parker (WIP), 83–84
Yangjaeping section in South China, 84
zirconium vs. thorium diagram, 86
chemical sediments, 67–74
average thicknesses and idiosyncratic features, 70
cap-carbonate sequences, 70–74
barite in Marinouan-type (based Ediacaran) cap dolostones, 73–74
distribution and thickness, 71
ear-late diagenetic barite in Taosuden Basin, 74
eyearly diagenetic barite on Dzbakhun Platform, western Mongolia, 74
eyearly diagenetic barite on Yangtze Platform, South China, 74
expanded and condensed sequences, 71
giant wave ripples, 72
highstand deposits of cap-carbonate sequences, 73
Marinouan-type (basal Ediacaran) cap-carbonate sequences, 70–73
Mid-Ediacaran cap carbonate sequences, 73
phosphorites, 74
primary and early diagenetic types of barite in cap dolostones, 73
seafloor barite in central Australia, 73–74
seafloor barite in northwestern Canada, 74
seafloor carbonate cement, 72–73
sheet-crack cements, 72
Suirnian-type (Cryogenian) cap-carbonate sequences, 73
transgressive cap dolostones in condensed sequences, 73
transgressive cap dolostones in expanded sequences, 71–72
thubstone (grapholite) stromatolites, 72
iron and manganese deposits, 67–70
Central Flinders Ranges (Holowilena) and Nackara arc (Braemar), South Australia, 69
distribution in time and space, 67–68
geochemical characteristics, 69
Jakabalsker Member (Numeees Formation, Port Nolloth Group), Gaerip Belt, Namibia and South Africa, 69
lithological associations, 68–69
notable examples, 69
Raptian Group, northern Canadian Cordillera, 69
genesis and significance of glacial-associated chemical sediments, 75–77
abiotic or biogenic dolomite, 76–77
accumulation rates for syndeglacial cap dolostones, 75
barite in cap dolostones, 76–77
cap-carbonates, 75
early diagenetic (void-filling) barite, 76–77
ferrous $v.$ euxinic anoxia, 75
iron and manganese oxide deposits, 75
localization of oxidative titration, 75
non-marine syndeglacial cap dolostones, 75–76
significance of seafloor aragonite cements, 76
sources alkalinity for cap dolostones, 76
subglacial sulphate-rich ferrous waters, 75
chemostratigraphy, 51–62
carbon isotopes, 52
Ediacaran Period, 59–61
iron speciation, 53
pre-glacial Neoproterozoic, 53–57
