Index

accuracy criterion, 150
ambipolar diffusion, 39
attachment cooling and heating, 110

beam experiments, 8
BGK model, 44, 137
Boltzmann
  "stosszahlansatz", 31
  collision integral, 33
  equation, 6, 42
  H-theorem, 35
  Ludwig, 3
boundary effects, 85, 125
bulk drift velocity
  model calculation, 114
Burnett function representation
  basis temperature, 151, 156
  expansion coefficients, 152
  matrix elements , 157
  of Boltzmann equation, 153
  truncation and convergence, 156
Burnett functions, 152, 178

central force potential, 24
centre-of-mass velocity, 23
Chapman-Enskog procedure, 120, 138
charge exchange, 42
  idealized model, 44
cold gas approximation, 75
collision matrix, 155
collisions
  transfer of a property in, 42
  attachment, 106
  Coulomb, 38
  elastic vs inelastic, 24
  fractional energy exchange, 45
  inelastic transfer rate, 55
  inverse, 27
  reactive, 14
  viscosity transfer, 47
configuration space, 13
constant collision frequency model, 62, 122
cross sections, 6
  differential, 26
  from swarm experiments, 8
  momentum transfer, 47, 69
  partial, 28, 155
  total, 95

Davydov distribution, 122
Debye length, 38
density gradient expansion, 80, 139
diffusion coefficients, 81
  ratio of longitudinal and transverse, 82

diffusion cooling
  eigenvalue problem, 130
  energy modes, 130
  model calculation, 134
  physical origin, 128
diffusion equation, 83, 139
  solution, 170
  solution in 1D, 88
  validity, 147
diffusion heating, 135
diffusion tensor, 81, 140, 145
drift tube experiment, 6, 8

effective temperature, 98
energy balance equation
  exact, 70
  with inelastic processes, 96
equation of continuity, 13, 66
equilibrium, 15
experiment
  quantities measured, 84
  role of the diffusion equation, 86
  Townsend-Huxley, Cavalleri, 125

Fick's law, 82, 137, 139
Fokker-Planck equation, 38, 47
Fourier transformation
  in phase space, 141
Franck-Hertz experiment, 5, 8, 85

generalized Einstein relations, 81, 100

H-theorem and second law, 36
heat flux, 77
hot atom chemistry, 109
hydrodynamic regime, 83, 121
hydrodynamic vs nonhydrodynamic regime, 147

impact parameter, 25
interaction integrals, 155
interaction potential, 8, 62
  polarization force, 60
ionization, 14
ions in parent gas, 42

kinetic equation
  analytic solution, 137
  generic, 21, 117
  relaxation time model, 137

Laguerre polynomial, 151
light particles, 48
Lorentz gas, 48, 122
low temperature plasma, 9

Mark boundary condition, 127
Mason-Schamp model, 76
Maxwell-Boltzmann distribution, 54, 92
Maxwellian, 4, 17, 36, 41, 138
mobility coefficient, 74
  model cross sections, 76
  real interaction potential, 76
  reduced, 85
moment equations
  constant collision frequency, 70
  inelastic collisions, 100
  linearized, 80
  with reactive effects, 106
momentum balance equation, 67
momentum transfer theory, 72

muliterm expansion, 54

negative absolute mobility, 10
negative differential conductivity, 100
  criterion, 101
  model calculations, 102
nonhydrodynamic regime, 85, 145
number density, 13

Ohm's law, 74

particle flux, 13
phase space distribution function, 15
plasma dispersion function, 142
polarization limit, 63
positron annihilation, 110
pulsed radiolysis experiment, 171

Rayleigh gas, 47
reactive effects, 86
  collision terms, 107
  heating and cooling, 108
reduced field , 84
reduced mass, 24
relative velocity, 23
relaxation time model, 44, 122
runaway, 170

scattering angle, 25, 29
smoothing factor , 98
sperical harmonics, 149
strong field limit, 75
summational invariants, 34
superelastic collisions, 174
swarm vs plasma, 39
symmetries, 19
  velocity space vs configuration space, 16

Talmi coefficient, 178
Talmi transformation, 155
temperature tensor, 78
tensor structure, 79
time-of-flight experiment, 8, 85, 86, 144
time-reversal invariance, 27
Tonks' theorem, 169
transport coefficients, 9
  bulk and flux, 113
travelling pulse, 89
  moments, 88
two-term approximation, 48, 53, 126, 150
  temperature tensor, 79

variational principle, 132
  trial function, 133
velocity averages, 16, 152
velocity distribution function, 3, 8
  electrons in methane, 16
velocity space, 15
  polar plot, 16

Wang-Chang, Uhlenbeck, de Boer, 56
Wannier energy relation, 73
weak field limit, 75
